# February Webinars

Presented by Jeff S. Holmes, P.E. CSI, CDT

## **Feb 21 - Introduction to Existing Building Retrofits - 12 PM CST**

This program introduces building retrofits as a method to achieve green building standards by adapting existing structures. While a building retrofit may have several types of interventions, participants will learn how effective air sealing will improve overall occupant comfort, health, and safety. This includes a detailed look at sources of air leakage and the various methods to address this infiltration. Several real-world examples will demonstrate the importance of identifying source of air leakage, investigating existing conditions, and proper detailing.

## **Feb 28 - Managing Condensation, Water Intrusion, and Energy in the Real World - 12 PM CST**

Window-opening air and water leakage has been a difficult problem for the construction industry. This course evaluates building failures, conventional construction approaches, and new developments in waterproofing techniques to show a path forward for designers seeking higher-performing wall assemblies.
